*Or equivalent depending on availability

Use	lbs per 1,000 sqft	lbs per acre
New lawn seeding	7 – 10	300 – 425
Overseeding	6 – 8	250 – 350

The TCS 'Resilience II' Turf Type Tall Fescue Blend: This five-way blend features top-performing NTEP tall fescue cultivars, including the highest-rated Daybreak and Xanadu (2022 trials). It excels in drought, shade, and traffic tolerance (mean scores: 6.7) and achieves elite ratings for overall quality (6.6) and color (6.5). Ideal for home lawns, sports fields, golf courses, and low-maintenance areas in cool-season and transition zones.

Suggested Maintenance: For best results, fertilize at least twice during the growing season and water as needed, approximately every three weeks or when drought symptoms are observed. The ideal mowing height is 2–3 inches, though the blend can perform well even with a low cut down to 0.5 inches with the appropriate care. This mix shows excellent drought tolerance and is a great choice for lawns without an irrigation system.
